Our focus is on achieving the highest standards of quality and finish while maintaining strict adherence to safety, budget, and timelines. We take pride in fostering genuine, collaborative relationships with all stakeholders, ensuring trust and mutual success in every project.

Core Competencies

Listed below are a range of competencies that the organisation can deploy to deliver value for its clients and their projects.

FRP

- In situ Walls
- stairs
- Pits
- Structural slabs
- Chemical bunds
- Abutments, wingwalls and piers
- Exposed aggregate slabs
- Columns
- Capping beams
- Architectural elements such as seating
- Kerb + channel
- Barriers

Precast – capacity to procure and install elements

- Culverts
- Pits
- Tilt Panels
- Beams

Earthworks –

- General earthworks to support the stated services above.

Carpentry –

- Site enabling works
- General carpentry
- Landscape carpentry
- Shelter installation

Management – Supply experienced supervision and project management along with supporting management systems.

We seek to be different.

Cinerari Contracting is a motivated and highly skilled organisation committed to delivering exceptional service and creating real value for our clients. We set ourselves apart through our dedication to quality, efficiency, and innovation.

Our approach is guided by the following principles:

- Delivering work to the highest standards of quality
- Ensuring punctuality and maintaining clear, consistent communication
- Providing experienced, motivated, and highly driven staff for project delivery
- Upholding a strong, genuine, and values-based safety culture
- Utilising the latest equipment and technologies to enhance efficiency
- Offering competitive pricing and reliable project delivery timelines

At Cinerari Contracting, we are committed to exceeding expectations and building long-term partnerships through our dedication to excellence.

An experienced team.

Luke Cinerari – Director

A trade-qualified Construction Supervisor with extensive experience across multiple construction disciplines, including civil and structural works, rail, mechanical, commercial fit-outs, and residential construction. Luke has worked with various companies, most recently Downer Group and Brunton Engineering.

In his most recent role at Brunton Engineering, Luke oversaw multiple rail projects across the Victorian network, managing projects valued between \$300K and \$2M. These projects primarily involved bridge and culvert construction and incorporated complex disciplines such as piling, heavy lifting, precast construction and installation, bulk and detailed earthworks, and full-track scope works. Luke consistently ensured projects were delivered on time, within budget, and in full compliance with safety standards.

As a site supervisor at Downer Group, Luke assisted in the delivery of the Civil and structural package at the Yan Yean water treatment plant and pumping station. The projects were delivered within budget and in accordance with the schedule. The project maintained zero LTIFR due to the strong focus on this aspect of the work.

Project spotlight

1. Supervision and delivery of Korong Vale culvert replacement for V/Line. The 11-day occupation included bulk and detail earthworks, 40 meters of culvert replacement consisting of 40 elements, 100 m3 of concrete aprons, 200 meters of track formation rebuild, and 200 meters of rail track installation. The project was valued at \$1.2m and was delivered on time and on budget.
2. End to end management of Congupna Creek Rail bridge replacement valued at 2M (V/Line). This project required supervision from the manufacturing stage through to delivery and presented challenges such as precast construction, piling in unfavorable ground conditions, heavy lift - 68T crosshead install and 40t bridge deck install, track formation rebuild and track lift.
3. Supervision of bridge widening works on the inland rail project working for McConnell Dowell. This project presented tight deadlines working under a 60 HR occupation, the scope including track removal, partial bridge demolition, lift and install structural members onto pre-poured and formed corbels, track reinstatement. This project was completed early and on budget.

We deliver our projects safely.

Cinerari contracting is committed to the highest industry standards, we take a proactive approach to risk management, strictly adhering to all regulatory requirements and providing ongoing training to maintain a safe working environment for our team and stakeholders. Our strong safety culture is built on accountability, innovation, and a commitment to zero harm, ensuring every project is completed with the utmost care and professionalism.
